A science lesson scenario:

Journey to the Centre of the Earth

Earth, cradle of people, seems to be the place with ideal conditions for life existing. But is it for sure? From time to time, public opinion is shocked by news about earthquakes, volcano eruptions or tsunami waves, devastating the coasts of oceans. What it's reason is? To find it, I invite you to the journey to the centre of the Earth. During the lecture you will know the structure of our planet, properties of it's strata and their influence on surface. Activities will be divided to two parts. The first one it'll be the lecture based on projection. The second one will be kept using exhibits of interactive exhibition "Energy, Sky and Sun". Especially with Magic Planet projector – the one device of such type installed not only in Poland but in hole Eastern Europe.
